Team ASA announces the NPWR-LCX Ultra Low Cost, High Performance Single Board Networking Computer.

San Diego, CA -- Team ASA Inc., a manufacturer of high-performance networking and storage products, today announced the newest member in the NPWR Single Board Networking Computer family of products, the "**NPWR-LCX**".

The NPWR-LCX is one of two new single board networking computers released by Team ASA this week. The NPWR-LCX is based on the recently released Intel 80219 XScale CPU, running at 600 MHz. The NPWR-LCX I/O suite consists of Dual Gigabit Ethernet ports, four Serial ATA ports, a USB 2.0 Device port and a Serial port. The NPWR-LCX Memory configuration supports 64 to 512 Megabytes of 266 MHz, DDR SDRAM and 8-16 Megabytes of FLASH ROM. The NPWR-LCX comes configured with a 2.6.13 Linux OS version on FLASH ROM Disk and a Linux Binary Distribution CD-ROM. As with all NPWR family products the NPWR-LCX comes complete with applications such as Samba, NetAtalk and Apache.

The NPWR-LCX has Team ASA's second generation 4" by 6.5" foot print, this compact foot print allows the NPWR-LCX to fit easily into most 3.5" drive bays and disk enclosures.

"The NPWR-LCX brings a new level of performance to Team ASA's low Cost line of single board networking computers." said Mark Murray Team ASA's president. "The NPWR-LCX's 600 MHz 80219 Xscale CPU provides processing performance similar to our higher end boards but a fraction of the cost" stated Murray. As with all NPWR products, customers can take the NPWR-LCX out of the box and implement a new product in a single day.

The price of a NPWR-LCX configured with a 600 MHz Intel 80219 XScale CPU, 64 MB of DDR RAM, Dual Gigabit Ethernet ports, and 4 SATA ports in 1000 piece quantity is \$195.00 USD. The NPWR-LCX is available and in production now.

About Team ASA, Inc.

Founded in 1992, Team ASA, Inc. (Team ASA), designs, develops, and markets networking and storage solutions for mid to large scale OEMs. Team ASA products allow OEMs in the Networking and Storage industries to easily implement embedded Linux and NetBSD systems either in existing products or in completely new products.
