Team ASA announces the NPWR-SCE Embedded Server, the newest member of the NPWR Server family.

San Diego, CA -- Team ASA Inc., a manufacturer of high-performance networking and storage products, today announced the newest member in the NPWR Server family of products, the “**NPWR-SCE**”.

The NPWR-SCE is Team ASA's newest XScale based server. The NPWR-SCE is Team ASA's first fully encased embedded server. The NPWR-SCE is based on the Intel 80321 XScale CPU, running at 600 MHz. The NPWR-SCE I/O suite consists of Dual Gigabit Ethernet ports, four Serial ATA ports, Dual SCSI-160 ports, and a Serial port. The NPWR-SCE Memory configuration supports 64 to 1024 Megabytes of DDR-233 SDRAM and 16 Megabytes of FLASH ROM. The NPWR-SCE comes configured with Linux OS and includes a 160 GB removable Serial ATA hard drive. As with all NPWR family products the NPWR-SCE comes complete with applications such as Samba, NetAtalk and Apache.

The 5" by 8" half height stainless steel case is perfect for embedded systems. The NPWR-SCE can be installed in any case with an open 5.25" half height drive bay. The dual enclosed fans will maintain a constant air flow over the NPWR-SCE CPU, even in the tightest configurations.

"Our OEM customers will appreciate the effort we have put into the engineering of the NPWR-SCE" quoted Mark Murray Team ASA's president. "The NPWR-SCE is completely encased system. The NPWR-SCE has all the best features of the NPWR-SC board, but in a rugged stainless steel case with a removable hard drive." stated Murray. As with all NPWR products, customers can take the NPWR-SCE out of the box and implement a new product in a single day.

The price of a NPWR-SCE configured with a 600 MHz Intel 80321 XScale CPU, 256 MB of DDR RAM, Dual Gigabit Ethernet ports, and 4 SATA, 160 GB removable hard drive in 1000 piece quantity is \$595.00 USD. The NPWR-SCE is available and in production now.

About Team ASA, Inc.

Founded in 1992, Team ASA, Inc. (Team ASA), designs, develops, and markets networking and storage solutions for mid to large scale OEMs. Team ASA products allow OEMs in the Networking and Storage industry to easily implement embedded Linux and NetBSD systems either in existing products or in completely new products.
